HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Rationale of the project

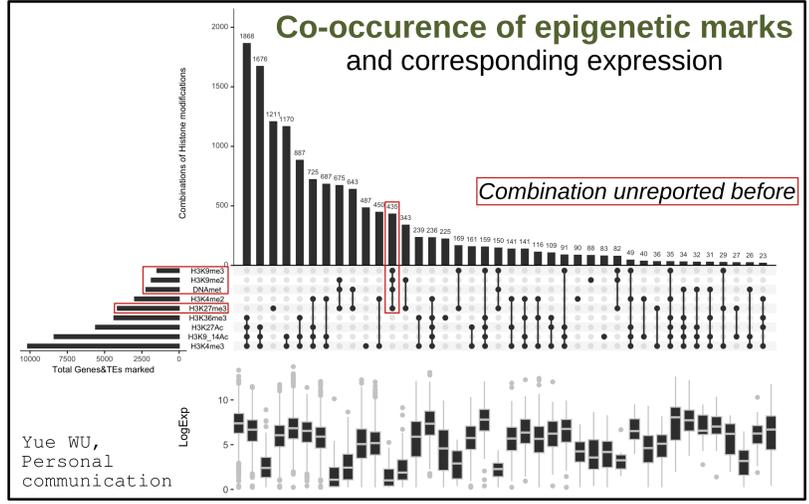

A telomere-to-telomere re-assembly

25 chromosomes – 27.8 Mb

... But few (epigenetic) data available:

- ✓ Transposable Elements (TEs) annotation
- ✓ DNA methylation

- 🔄 Transfer data from fragmented assembly (Phatr3, epigenetic marks)
 - 🔄 Update two histone marks annotations with fresh data
 - 🔄 Monoclonal vs polyclonal antibodies for H3K9me3 and H3K27me3
 - ➕ Add two new histone marks: H3K27Ac and H3K36me3
 - 🔔 Release first (epi)Genome Browser to the Research Community
- <https://PhaeoEpiView.univ-nantes.fr>

Integrate YOUR data!

Genes

- Chr-by-chr liftover of Phatr3 annotation: 12,178 → 11,739
- 439 missing genes, among which 295 were duplicated ✓
- Validation
 - Gene lengths difference: mostly below ± 0.1% ✓
 - Gene expression difference: mostly below ± 0.1% ✓

Transposable Elements

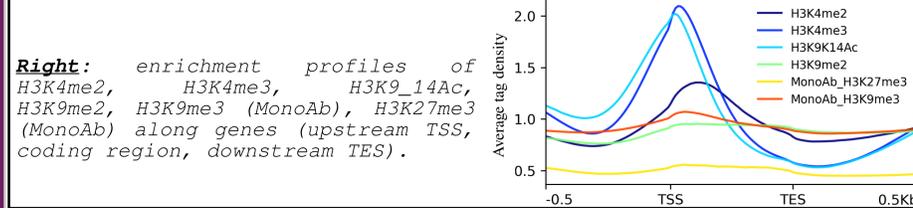

- EDTA annotation, published with assembly (Giguere et al, 2022)
- Similar figures to what was previously published
 - Phatr3: 3705 copies of TEs, 3.373 Mbp
 - EDTA: 3190 copies of TEs, 3.276 Mbp

Expression

- Unstranded RNAseq from previous study (Murik et al, 2018)
 - Early growth: ~500K cells/mL
 - Late growth: ~1M cells/mL

Histone Marks

- Five permissive marks
 - H3K4me3, H3K9/K14Ac, H3K4me2, H3K27Ac, H3K36me3
- Three repressive marks
 - H3K27me3, H3K9me2, H3K9me3

DNA Methylation

- McrBC (Veluchamy et al, 2013), Bisulfite-seq (Hoguin et al, 2021) and Nanopore basecalling (Giguere et al, 2022)

Ecotypes Expression

- 17 *P. tricornerutum* natural accessions, sampled all over the globe
- 6 clades, colored by cluster, stranded RNA-seq

Conclusions

PhaeoEpiView provides accurate, up-to-date genome and epigenome view of epigenetic regulation of genes and TEs. It is intuitive, user-friendly and allows users to upload their own tracks. PhaeoEpiView will contribute to boosting fundamental and applied research in microalgae and single-celled species.
